

Identity Theft Protection

What Level of Protection do you currently have?

Does it cover all 5 Major Types of Identity Theft?

We now need protection that covers all 5 major types of ID Theft:

1

Driver's License ID Theft

Thieves can become “you” by creating a driver's license with your information and their picture. Once this is created, they can easily expand into the other 4 major types.

2

Tax/Employment ID Theft

One or more people file a tax return in your name before you do, or work jobs in your name and you are responsible for the unpaid taxes, until proven otherwise.

3

Medical ID Theft

An imposter receives medical treatments/procedures in your name and you get the bill. Even worse, their medical history can become mixed with yours.

4

Character/Criminal ID Theft

From traffic tickets to DUI to warrants out for your arrest... How do you prove it wasn't you?

5

Credit File ID Theft

Fraudsters open NEW accounts in your name using a different mailing address. Collection agencies come looking for you when the payments are late.

The “Crime of the Century” has reached epidemic proportions

- ▶ Over 30,000 new victims are being hit every 24 hours (over 12 million last year alone).
- ▶ It takes an average of 600 business hours to correct your records and prove your innocence.
- ▶ Only 15% is credit-related anymore (the majority of id theft is no longer detectable in a credit file).
- ▶ It is impossible to prevent 4 of the major types (fake ID, tax/employment, medical, character/criminal).
- ▶ We cannot control what happens to our personal information stored in files or databases.
- ▶ 94% of hospitals have had information leaked (average records per breach: 2,769).
- ▶ ID Theft revenues have surpassed the revenues of the worldwide drug trade.
- ▶ Only 1 in 700 identity thieves are ever caught and prosecuted.
